Preface	v
1. Topological dynamics	
1.1 Basic definitions	1
1.2 Contractions	1
1.3 Linear maps	4
1.4 Translations of the torus and topological transitivity	9
1.5 Toral automorphisms and chaotic dynamical systems	13
1.6 Symbolic dynamics	17
2. Equivalence and stability	
2.1 Basic definitions	21
2.2 Expanding maps of the circle	21
2.3 Recurrence and Smale's horseshoe	26
2.4 Stability of hyperbolic toral automorphisms	29
2.5 Local linearization in one complex variable	32
3. The stable manifold theorem(s)	
3.1 Statements	39
3.2 Proof of the Hadamard-Perron theorem	46
4. Hyperbolic sets	
4.1 Stable and unstable manifolds for hyperbolic sets	69
4.2 The closing lemma	72
4.3 Locally maximal hyperbolic sets	74
4.4 Structural stability of hyperbolic sets	81
5. Appendices	
5.1 The specification theorem, <i>by C. Bonanno</i>	87
5.2 Irwin's proof of the stable manifold theorem, <i>by R. Stasi</i>	91
5.3 The Grobman-Hartman theorem, <i>by M. Maracci</i>	100
5.4 Homoclinic points and horseshoes, <i>by M. Cerulli</i>	102
